

## Skimmer

- Eliminates routine maintenance by removing debris before it sinks to the bottom of the pond.
- Requires only two to three minutes every other week to clean while standing outside the pond.
- Hides the pump and plumbing from view alongside your pond instead of in the pond.
- Keeps the pump free from clogging by trapping waste in a catch area before it reaches the pump.
- High-density polyethylene construction assures strength with extreme durability.
- Patented - adjustable faceplate on Signature Series™ has four inches of travel, enabling you to tweak out the perfect water level.

## Rocks & Gravel

- Adding rocks and gravel reduces pond maintenance
- Gravel, unlike a smooth pond liner, provides surface area for bacteria to colonize
- A stone bottom looks far more natural and is safer to walk on than an exposed slippery rubber liner

## Bacteria

- AquaClearer™ Extreme bacteria naturally balances the pond.

## Underlayment

- A non-woven, needle punched underlayment forms a soft padding for the liner
- Unlike newspapers, it's quick to install
- Unlike sand, it completely covers the vertical areas of the pond shelves
- Unlike carpet padding, it allows gases to escape out the sides while looking more professional

## Liner

- Strong 45-mil EPDM liner is the best choice for most pond installations
- Unlike concrete, it is easy and inexpensive to install and won't crack
- 20-year warranty

## BioFalls® Filter

- Creates a perfect base for building beautiful, leak-free waterfalls.
- Requires only once a year cleaning when used in combination with a skimmer pre-filter.
- A non-clogging swirl chamber allows even distribution of water, aiding filtration and increasing waterfall width.
- Can be sunk into the ground for a stream effect or raised to create a greater water drop.
- Simple, uncluttered design. No moving parts to break.
- Easy to camouflage, removable upper rack on Signature Series™ BioFalls® Filter makes filter easy to disquise into the landscaping using rocks, plants and gravel.
